

PM150B PELLET MILL

Features

PM series flat die pellet press is improved by many technicians and experts' experiment, the machine has achieved good performance and result in finished particle. The working machine temperature exceeds to 80°C, makes granules glabrous, rigidity appropriated. During processing, you can put different proportion additives, amylum to make protein concretionary changeability thus enhance nutrition, conveniently absorption and killing microbe. Because materials dry in and dry out and granules' moisture is lower than 10%, so it is convenient to seal and store.

Application scope

It is the ideal equipments that making feed for chicken, piggy, cattle, horse and others poultry and livestock. The suitable material in widely scope includes: wheat bran, corn peeler/flour, soybean meal, oat, grass powder, bone powder, conch powder, fish powder, additive etc.

Technical Data

Model: PM150B

Capacity: 75-100kg/hr

Power: 3kw/380v/50hz/3phase

Weight: 80/100kg

Outside dimension: 710*390*910mm

Packing: Plywood case

Spare parts	Flat Die (4mm-10mm)	Flat die (3mm)	Flat die (2.5mm)	Roller
Optional				

PM200C PELLET MILL

Features

PM series flat die pellet press is improved by many technicians and experts' experiment, the machine has achieved good performance and result in finished particle. The working machine temperature exceeds to 80°C, makes granules glabrous, rigidity appropriated. During processing, you can put different proportion additives, amylum to make protein concretionary changeability thus enhance nutrition, conveniently absorption and killing microbe. Because materials dry in and dry out and granules' moisture is lower than 10%, so it is convenient to seal and store.

Application scope

It is the ideal equipments that making feed for chicken, piggy, cattle, horse and others poultry and livestock. The suitable material in widely scope includes: wheat bran, corn peeler/flour, soybean meal, oat, grass powder, bone powder, conch powder, fish powder, additive etc.

Technical Data

Model: PM200C

Capacity: 200-300kg/hr

Power: 7.5kw & 15HP

Net Weight:200/230kg

Outside dimension: 1130*480*920mm

Packing: Plywood case

Spare parts	Flat Die (4mm-10mm)	Flat die (3mm)	Flat die (2.5mm)	Roller
Optional				

PM300C PELLET MILL

Features

PM series flat die pellet press is improved by many technicians and experts' experiment, the machine has achieved good performance and result in finished particle. The working machine temperature exceeds to 80°C, makes granules glabrous, rigidity appropriated. During processing, you can put different proportion additives, amylum to make protein concretionary changeability thus enhance nutrition, conveniently absorption and killing microbe. Because materials dry in and dry out and granules' moisture is lower than 10%, so it is convenient to seal and store.

Application scope

It is the ideal equipments that making floating pellets fish, nourishing pellets for chicken, piggy, cattle, horse and others poultry and livestock. The suitable material in widely scope covers wheat bran, corn/maize flour, soybean meal oat, grass powder, bone powder, conch powder, fish powder, additive etc.

Technical Data

Model: PM300C

Capacity: 600-800kg/h

Power: 22kw

Net Weight: 410/450kg

Outside dimension: 1270*600*1070mm

Packing: Plywood case

Spare parts Optional	Flat Die (4mm-10mm)	Flat die (3mm)	Flat die (2.5mm)	Roller
